

## WHAT WE DO...

*We offer a comprehensive range of risk assessment/management services, cyber audits, and policies & procedures drafting and review. Our expertise includes employee, customer, and vendor training, as well as online, space, and physical security. We specialize in database management, intrusion monitoring/detection, incident responses, and forensic management. With system testing/hardening, HMI development, and SCADA security, we ensure robust protection. Additional services include off-site backup & recovery, robotic surveillance, GSaaS (Ground Support as a Service), and more. Rely on our tried, true, state-of-the-art tools and techniques to safeguard your investments effectively.*

# #1- Risk Assessment/ Management

Risk assessment/management is a process of identifying, analyzing, and addressing potential threats and uncertainties to minimize negative impacts and maximize opportunities. It involves evaluating the likelihood and consequences of risks, implementing measures to mitigate them, and preparing contingency plans for effective decision-making.

## Risk Management at a glance...

Our risk assessment/management services provide a comprehensive and proactive approach to safeguarding your business and investments from potential threats and uncertainties. We understand that every organization faces unique challenges, so our expert team tailors solutions to meet specific needs.

Starting with a meticulous risk assessment, we identify and evaluate potential hazards, vulnerabilities, and exposures across your operations, infrastructure, and systems. By analyzing the likelihood and potential impact of each risk, we gain valuable insights to prioritize and develop an effective risk management strategy.

## THERE'S MORE...

Our cyber audits go beyond standard security checks, thoroughly examining your digital infrastructure and technologies. We assess vulnerabilities, potential data breaches, and other cyber threats to ensure your systems are fortified against evolving risks.

To bolster your defense, we draft, review, and update policies and procedures, ensuring compliance with industry regulations and best practices. Our documents not only establish clear guidelines but also promote a culture of security awareness among your employees, customers, and vendors.

As technology evolves, so do risks. We provide cutting-edge training to equip your team with the knowledge and skills to identify and respond to potential threats effectively. Whether it's cybersecurity, physical security, or space security training, we empower your workforce to be your first line of defense.

With our intrusion monitoring and detection services, we deploy advanced tools and techniques to detect and prevent unauthorized access and malicious activities. In the event of an incident, our experienced incident response team acts swiftly to contain and mitigate damages, minimizing downtime and reputational harm.

## AND FINALLY...

Our forensic management services aid in post-incident investigations, providing crucial insights into the cause and scope of breaches for legal and remediation purposes. To fortify your systems, we conduct system testing and hardening, including PenTesting, ensuring robust security and compliance with industry standards.

We also offer expertise in HMI development and SCADA security, bolstering safety in critical infrastructures.

Protecting your data is paramount. Our off-site back-up and recovery services, including disaster recovery planning, provide peace of mind in the face of potential data loss.

As the world embraces automation, our robotic surveillance and reporting solutions enhance monitoring efficiency and accuracy.

For aerospace and space missions, our GSaaS (Ground Support as a Service) ensures mission-critical support, adhering to rigorous security measures.

In a dynamic threat landscape, our risk assessment/management services equip your organization with tried, true, and state-of-the-art tools to proactively mitigate risks and safeguard your investments for a resilient and secure future.
